

Dear James and Chong,

Some good news for your hard work, the paper from A Model of Currency Linkages During Crises has received a major revision. This means 50-50; a good job at this point can lead to acceptance.

What next? Please carefully review one by one all what the journal has requested to be done. Detail by detail what they have asked to be done. Then send me the list. From there, we will decision on how to tackle it.

They gave a short time, so we need be fast and efficient.

The journal is not the best in the world, but it's decent. Check the rating here [ABDC-JQL-2022-v3-100523.xlsx](#)

Regards
Oyakhi

A Model of Currency Linkages During Crises: Not All

Dear Dr. Ibhagui,

Thank you for submitting your manuscript to the Journal of International Financial Markets, Institutions & Money.

I have completed my evaluation of your manuscript. The subject editor and reviewer recommend reconsideration of the manuscript following major revision and modification. I invite you to resubmit your manuscript after addressing the comments below. Please resubmit your revised manuscript by **Jan 22, 2026**.

When revising your manuscript, please consider all issues mentioned in the comments carefully: please outline every change made in response to the comments and provide suitable rebuttals for any comments not addressed. Please note that your revised submission may need to be re-reviewed.

To submit your revised manuscript, please log in as an author at <https://www.editorialmanager.com/intfin/>, and navigate to the "Submissions Needing Revision" folder under the Author Main Menu.

Research Elements (optional)
This journal encourages you to share research objects - including your raw data, methods, protocols, software, hardware and more – which support your original research article in a Research Elements journal. Research Elements are open access, multidisciplinary, peer-reviewed journals which make the objects associated with your research more discoverable, trustworthy and promote replicability and reproducibility. As open access journals, there may be an Article Publishing Charge if your paper is accepted for publication. Find out more about the Research Elements journals at https://www.elsevier.com/authors/tools-and-resources/research-elements-journals?dgcid=ec_em_research_elements_email.

The Journal of International Financial Markets, Institutions & Money values your contribution, and I look forward to receiving your revised manuscript.⁵⁶²

Kind regards,
Peter G. Szilagyi
Editor
Journal of International Financial Markets, Institutions & Money

- Editorial Comments:
- The final paragraph of the introduction should outline the structure of the remainder of the paper.
 - Section 4:
 - a) The focus on "major" pairs is reasonable, but the selection excludes some widely traded pairs such as USD/CAD and NZD/USD, which are also commodity-linked and liquid. The rationale for exclusion should be stated explicitly
 - b) The list mixes direct USD quotes (EUR/USD, GBP/USD, AUD/USD) with indirect ones (USD/JPY, USD/CHF). This asymmetry could complicate interpretation and should be justified
 - The tables are not presented in a professional manner. Include sophisticated notes that adequately explain their content, also providing an information on the sample period.
 - The conclusion should contain an avenue for future research.

Reviewer #1: Journal of International Financial Markets, Institutions & Money

Manuscript Title: A Model of Currency Linkages During Crises: Not All Crises Are Born Equal for Long-run Currency Linkages

Manuscript Draft ID: INTFIN-D-25-00606

1. Original Submission
Recommendation: Major revisions

1. Comments to Author

The manuscript investigates linkages on foreign exchange markets. It focuses on two main questions: (i) whether cointegration relationships of major currencies persist across crisis episodes and (ii) whether long-horizon currency returns show lower correlation as currency autonomy declines. Empirical analysis is based on cointegration analysis and conducted using daily data on five major currency pairs ; EUR, GBP, JPY, CHF, and AUD, against USD across the Dot-Com (1997-2000), Global Financial Crisis (2007-2009), and COVID-19 (2020-2022) crises. Results show that the Global Financial Crisis uniquely produced a cointegrating relation, with deviations corrected by EUR/CHF/GBP over two- to five-week half-lives, while Dot-Com and COVID-19 displayed none. Results show as well that systemic USD-centered stress compresses autonomy, which causes currencies to load similarly and yields a stable anchor, while heterogeneous or novel persistent shocks dissolve this cointegration. The author.s state that not all crises are born equal. Effects are dissimilar.

1.1. Major comments

The issue under study is interesting and appropriate.

The text is well written text and ideas are understandable.

Somme comments should be raised for an academic research paper.

- ☐ Despite the focus on foreign exchange markets was explained in the introduction section, research motivation is absent-minded. What new ingredients do the authors contribute compared to existing ones, and why are they important? Why is studying a topic that falls into an area with a well-developed literature discussion significant? These questions remain to be answered in the current paper.
 - ☐ The research gap is not clearly stated. In my opinion, the contributions should be written in the introduction section in a practical way. The contribution should clearly state how this paper differs and contributes to the existing literature. I therefore suggest that the authors should add new / up-to-dated references to compare the similarities and differences in the research design of this manuscript with existing ones to highlight the research contribution.
 - ☐ Theoretical background of the linkages under study should be presented. Main economic channels that link major currencies, investment, market efficiency and arbitrage should be as well discussed.
 - ☐ There should be a separate discussion to derive clear research hypotheses, which the authors derive based on literature and the theoretical background. The authors should focus more on emphasizing the theoretical channels through which the main hypothesis and arguments of the study could be supported. I would have wanted to see more arguments about what the gap is, and why filling this gap may advance our knowledge, and not only what has been done or not.
 - ☐ The author.s should explain the rationale behind constructing the model that would strengthen the justification for the proposed research model.
- The author(s) need to provide convincing evidence about the merit and the comparative advantage of the applied model in this study compared with other approaches. Why not other models such as TVP-VAR or Q-VAR analysis.
- ☐ The author.s should provide a clearer rationale for data frequency and sample selection.
 - ☐ Comparative discussion and review of the recent literature in related fields and explanations should be carefully provided to rationalize the obtained findings. The results discussion section should have the following: (a). The discussion section can compare common findings and inconsistencies in literature. (b). The end of the discussion section must deduce some common findings in the literature that address the problem stated in the introduction and accordingly explain whether the findings are in line with theoretical expectations and why. (c). To comment on the trends/findings and show your understanding of what your data suggests.
 - ☐ The implications section could be made more actionable by addressing specific stakeholders' needs.

1.2. Minor comments

- ☐ Well written text
- ☐ Cited references in the in-text should be fixed. See authors guidelines.
- ☐ Overall, make sure that all math's symbols and variables are defined clearly, and the writing is logical and coherent.
- ☐ Acronyms such as BIS (page 7) should be defined first.
- ☐ Data, page 18. Exchange rates should be harmonized. Sit rise means that USD appreciates against currency i. that's "USD/i" is direct quotation. Please harmonize the quotations and make sure that this will not affect interpretation of results.
