To: James Evans <jamwevan@umich.edu>, CHONG HAN <chongh3814@g.ucla.edu>

Dear Chong and James,

There is an update. The journal that requested a revision of our paper has now requested yet another revision.

Please, read the latest revision request and focus specifically on these and implement them in the paper:

1. Move all tables and figures to the end
2. Insert "Insert Table X/Figure Y here" markers
3. Global language/grammar sweep (Please ensure that the writing is completely free of poor/unnatural phrasing and wording, language errors and inconsistencies as well as typos, article, capitalization, quotation, hyphenation, comma, spacing and indentation errors etc.)

This is the particular request from the editor's report for points 1 and 2:

 Given the large number of tables/figures, they should all ideally be placed at the end of the paper, with the location of the table or figure specified in the body of the paper (e.g. Insert Table 1 here). This would help avoid production problems.

Please ensure the task is carefully and thoroughly done just as the editor has requested.

The deadline for you to do the three tasks is January 25.

Regards
 Oyakhi

Subject: Decision on submission to Journal of International Financial Markets, Institutions & Money

External Email - Use Caution

Manuscript Number: **INTFIN-D-25-00606R1**

A Model of Currency Linkages During Crises: Not All

Dear Dr. Ibhagui,

Thank you for resubmitting your manuscript to the Journal of International Financial Markets, Institutions & Money.

I have completed the evaluation of the manuscript. The subject editor recommends reconsideration of the manuscript subject to further revision and modification. I have also added additional comments, as the paper stops short of following the conventions of papers customarily published in JIFMIM and its family of finance journals in a number of aspects. I invite you to resubmit your manuscript after addressing the comments below. Please resubmit your revised manuscript by **Mar 15, 2026**.

To submit your revised manuscript, please log in as an author at <https://www.editorialmanager.com/intfin/>, and navigate to the "Submissions Needing Revision" folder under the Author Main Menu.

Research Elements (optional)

This journal encourages you to share research objects - including your raw data, methods, protocols, software, hardware and more – which support your original research article in a Research Elements journal. Research Elements are open access, multidisciplinary, peer-reviewed journals which make the objects associated with your research more discoverable, trustworthy and promote replicability and reproducibility. As open access journals, there may be an Article Publishing Charge if your paper is accepted for publication. Find out more about the Research Elements journals at https://www.elsevier.com/authors/tools-and-resources/research-elements-journals?dgcid=ec_em_research_elements_email.

The Journal of International Financial Markets, Institutions & Money values your contribution, and I look forward to receiving your revised manuscript.

Kind regards,

Peter G. Szilagyi

Editor

Journal of International Financial Markets, Institutions & Money

Editor: Please let me add the following to the subject editor's comments.

1. Please be circumspect with the files you submit and only submit only one (the latest) version of the paper. The current submission contains two different versions. The title you submitted in the system is also cut off: it is "A Model of Currency Linkages During Crises: Not All". Such issues can lead to significant production problems.
2. The paper should fully conform to the structure and presentation of papers customarily published in JIFMIM. I recommend that you look at recent papers published in JIFMIM for guidance.
 - The introduction should be a single section with no subsections and no headers. The customary structure for the introduction is research problem statement and positioning; how the paper is different from and contributes to previous studies; data and methodology; results and their economic interpretation; how the results ultimately contribute to the existing literature.
 - The body of the paper is currently also very fragmented/over-segmented and not structured in line with the conventions of papers published in JIFMIM. The structure should be substantially consolidated, reducing the number of sections and subsections, removing non-numbered headers, rewriting bullet point lists into continuous text and improving narrative flow. The typical main sections are introduction (with no subsections); literature and hypotheses; data and methodology; empirical results; conclusion.
 - Regarding the hypotheses: hypotheses are meant to be theoretically motivated and empirically testable/falsifiable predictions developed in advance that are then tested with the appropriate data and methodology choices. What the paper currently presents as hypotheses are essentially summaries of the story the paper wants to tell, assumptions built into the model or conclusions drawn after seeing the results. Notably, the hypotheses do not really set up concrete predictions that could genuinely be tested or rejected, and they are certainly not used to guide the data and methodology choices.
 - As the subject editor also mentions, the way that many tables and figures are presented is also not in full keeping with the conventions of papers published in JIFMIM. Notably, the notes are meant to be a single paragraph explaining the table/figure to allow the reader to understand exactly what is in it without having to refer back to the text. At the same time, the notes are NOT meant to interpret or draw conclusions, that should be done in the text itself. The current notes are quite inconsistent, some doing interpretation that should be reserved for the text, while others failing to provide enough information to read the table/figure. The separate headers for the sample period and significance should be deleted. Given the large number of tables/figures, they should all ideally be placed at the end of the paper, with the location of the table or figure specified in the body of the paper (e.g. Insert Table 1 here). This would help avoid production problems.
3. The keywords and JEL codes, important for academic discoverability and indexing, would benefit from further

refinement. Notably, the current keywords emphasize crisis transmission and risk, whereas the paper's contribution is about regime-dependent long-run currency structure and cointegration. The current JEL codes are broadly appropriate, but overemphasize generic asset pricing and under-signal the paper's core contribution.

4. Please ensure that the writing is completely free of poor/unnatural phrasing and wording, language errors and inconsistencies as well as typos, article, capitalization, quotation, hyphenation, comma, spacing and indentation errors etc.

Subject Editor:

- Figures and tables are not presented in a professional manner. Include sophisticated notes that adequately explain their content, also providing an information on the sample period.
- The final paragraph of the introduction should outline the structure of the remainder of the paper.
- The conclusion should contain an avenue for future research.
- The authors should refine the statement "Our dataset consists of daily spot exchange rates, covering recognized crisis periods in the global market", because the crises referenced in the paper are primarily equity-market crises, not FX-specific ones. It remains unclear why major currency-related stress episodes—such as the European Sovereign Debt Crisis (2012)—are not included. I recommend expanding the data section to explain the motivation for the crisis selection in more detail. In particular, the authors should clarify the criteria used to define a "crisis period" in the FX context and justify why certain well-known FX disruptions were excluded.

Hello James - and maybe Chong if interested

BAUM TenPers is starting a new math sequence taught by this professor

<https://sites.google.com/view/olubunmifadipe/about>

Classes are mostly weekends, starting tomorrow.

I am writing to ask if you would want to participate, so I can give them your name and email to receive updates.

Regards
Oyakhi

Dear Dr. Ibhagui,

Thanks for sharing this information and this professor looks like really professional in math. However, I am not capable to take more math classes since I am now taking 6 classes at UCLA to graduate earlier.

You always think of both of us whenever there is an opportunity coming up, I really appreciate for your consideration!

Best,
Chong

Hello Oyakhi,

You can share my name and email. As long as there are no additional costs, I would be willing to attend these lectures on the weekend unless I have something big going on (like an exam).

I am working right now on the Cointegration Paper. Any updates on the BITCOIN paper? We submitted both around the same time. Expecting a revision sometime soon.

Best,

James Evans

Dear Dr. Ibhagui,

I wanted to provide a brief update on the crisis paper.

I have completed all the global language and consistency sweeps to the best of my knowledge, addressing grammar, wording, and overall clarity throughout the manuscript. I also referred to several relevant journal articles during this process to ensure alignment with standard academic usage and presentation.

At this point, I believe the paper is ready for your final review. I would greatly appreciate it if you could take a last look and let me know if there are any remaining issues or improvements needed.

Thank you very much for your time and guidance.

Best regards,

Chong Han

Hello Dr. Ibhagui,

Thanks for your kind message! So far, I haven't heard any updates from the schools I applied which is not bad so far(neither my friends and someone I know who applied the same track with me) since someone I know received rejection letter from USC and other school. So I guess the update should be released in the next month.

Best,
Chong
