To: James Evans <jamwevan@umich.edu>, CHONG HAN <chongh3814@g.ucla.edu>

Dear Both,

See below for referee/editor comments yet again.

Please do the following

1. Print out the paper, the whole thing
2. Take a pen while you read everything. While reading, pretend you never read it before.
3. Each time, read each line and scout for all types of mistakes, including especially writing error, anything off, etc
4. Note all the mistakes you find and especially the ones that are most related to what the referee says is a problem.

Put them together and send your findings to me. If you can do this in the next couple days, that would help.

I have completed the revision requested by the referee, been working on it since morning, I think I touched all his points. Just that I think there may still be something off and I want us to fully address them before we send out again, so they can accept this time and so the paper looks clean and flawless, well near flawless nothing is perfect.

Thank you.

Regards
Oyakhi

A Model of Currency Linkages During Crises: Not All Crises Are Born Equal for Long-run Currency Linkages

Dear Dr. Ibhagui,

Thank you for your resubmission to the Journal of International Financial Markets, Institutions & Money.

While the revised paper addresses some of my comments, unfortunately others have only been partially addressed.

1. The body of the paper remains over-segmented. This makes the paper continue to look more like a technical note than an academic paper customarily published by JIFMIM. For example, many subsections are just single paragraphs and are unnecessary. The same goes for the separate subsections for each hypothesis and robustness test. Sections 5.2-5.6 should just be a single section. The paper also continues to make use of bullet points rather than continuous text and non-numbered headers that should be removed.
2. The revision improves the presentation of the "hypotheses", but several are still not written in a way that can be clearly tested or rejected. At the moment, some read more like the story the paper wants to tell than concrete predictions tied to what the paper actually estimates. In addition, Hypotheses 3a-3c are not mutually exclusive alternative hypotheses as implied by the numbering - they are separate claims about different currency types and they can all be true at the same time. Please rewrite the hypotheses so that each one makes a specific, falsifiable prediction and is explicitly linked to a corresponding empirical test in the methodology and results sections.
3. There remain writing problems. For example, the paper alternates between "vector error correction model", "vector error correction Model" and "Vector Error Correction Model". Please make sure you go through the proof very carefully, and correct any remaining language errors and inconsistencies as well as typos, article, capitalization, quotation, hyphenation, comma, spacing and indentation errors etc.
4. The keywords and JEL codes are broadly acceptable but they are still not well-aligned with the paper's core contribution and will not help discoverability as much as they could. The keywords mix precise terms with generic terms (exchange rates, global crises) and a non-standard term (currency autonomy) that is unlikely to be used in a search. G15 signals a generic international asset pricing/markets paper rather than a time series/cointegration paper.
5. Please let me add that the title also has room for improvement: it repeats currency linkages twice; "a model" makes it sound like the contribution is a theoretical model; "not all crises are born equal" says that there is heterogeneity, but not in what sense. A good title tells the reader what the paper is about, signals the contribution and makes the paper discoverable.

Please resubmit your revised manuscript by **Mar 18, 2026**.

To submit your revised manuscript, please log in as an author at <https://www.editorialmanager.com/intfin/>, and navigate to the "Submissions Needing Revision" folder under the Author Main Menu.

Research Elements (optional)

This journal encourages you to share research objects - including your raw data, methods, protocols, software, hardware and more - which support your original research article in a Research Elements journal. Research Elements are open access, multidisciplinary, peer-reviewed journals which make the objects associated with your research more discoverable, trustworthy and promote replicability and reproducibility. As open access journals, there may be an Article Publishing Charge if your paper is accepted for publication. Find out more about the Research Elements journals at https://www.elsevier.com/authors/tools-and-resources/research-elements-journals?dgcid=ec_em_research_elements_email.

The Journal of International Financial Markets, Institutions & Money values your contribution, and I look forward to receiving your revised manuscript.

Kind regards,

Peter G. Szilagyi

Editor

Dear Dr. Ibhagui,

Thank you for forwarding the editor/referee comments and for outlining the proofreading tasks so clearly.

I wanted to let you know that I will begin working on these tasks starting next week. This week I am celebrating Chinese New Year with my family, which is the most important week of the year for me, so my availability in this week is limited.

Beginning next week, I will come back, and I will do the tasks.

Thank you again for your guidance and patience.

Best regards,

Chong Han

Hello Chong

Happy New Year.

Minqi told me about the new year just today.

I'm surprised you haven't heard from any schools yet. Some of your colleagues at BAUM TenPers are already getting acceptances and rejections

Regards
Oyakhi

Hello Oyakhi,

I followed the feedback of the editor and implemented the changes on the overleaf. I did not touch the keywords or JEL codes. Did you fix those?

Best,

James Evans[Github](#) | (203) 512-9663 | [LinkedIn](#)

To: James Evans <jamwevan@umich.edu>Cc: CHONG HAN <chongh3814@g.ucla.edu>

Hello James,

In my previous email, I asked that you both print the paper, read it and write a report of where you think there are errors in the paper. The instruction didn't say you should implement anything in the paper, all of which I had already done. In addition, I shared a referee report I wrote with both of you on Overleaf.

Please revisit my email and follow the points in the previous email, and also read the "response to referee" that I prepared and shared on Overleaf with both of you.

Regards

Oyakhi

Hello Oyakhi,

I reverted the changes on overleaf. I'll write them out on paper on Friday. I feel that the paper is still too segmented after your changes.

Best,

James Evans

Hello James

Ok. Please include the comments in your full report and add it to the new comments you will come up with after you read the paper.

There is Chong and another person printing and reading as well.

We will compile all the comments and then implement all at once.

Regards
Oyakhi
